## Ring Arm Mount

### Instruction Manual

The feature of the Ring Arm Mount is that you can instantly shoot horizontal or vertical pictures without moving strobes (lights) position. Please follow below cautions and instruction.

- \*It will be a cause of damage on the ring arm mount over 1200g of total weight attached (strobes, lights, arms, etc. ). Please use it total weight in 1200g or less.
- \*When you carry a housing on land, please fold all the arms with strobes (lights) to compact.
- \*When you attach arms, strobes, and lights on the ring arm mount, please do not hold the arms or ball mount attaching to the ring arm mount and carry the housing. It will be a cause of damage the housing.
- \*Please remove the ring arm mount and proceed the maintenance after diving. If you leave the ring arm mount without maintenance after diving, it may be cause of malfunction.
- \*Please make sure the arms and clamps do not hit and damage the housing.
- \*Some of arms, arm bases, clamps may not be compatible with the ring arm mount. Please contact dealers where you purchased the housing.
- \*Umi Umi Ball Base L is sold separately.

1. Turn the lever at 45 degree in front right side, and rotate the ring arm mount a bit.

2. Release the lever, and rotate the ring arm mount. It stops at 90 degree with lock system.

3. Turn the lever at 180 degree, and rotate the ring arm mount. It turns 360 degree without lock.

## Maintenance

1. Unscrew the screw at left side by hex wrench and remove it.

2. Remove the spacer.

3. Turn the lever at 180°.

4. Slightly open the mount by hands.

※ Please be careful not to pinch your fingers by bouncing back.

5. Slightly open the ring arm mount and remove it upward.

6. Clean the groove where the ring arm mount is placed. When you place back the ring arm mount to the base, please reverse the procedure.

※ Please be careful not to pinch your fingers.
